

Workshop: Frugal & Open Innovation in Medicine & Care

Simple, robust solutions instead of expensive high-tech: in this workshop we develop affordable innovations for medicine and care. The ideas are documented as open source for worldwide use.

Your ideas are key! No one needs to bring ready-made solutions or prototypes.

Example topics:

- Simple vital sign monitoring for outpatient care in rural regions
- Making medication intake visible without complex apps or constant monitoring

What happens next?

The best concepts will be further developed into open-hardware prototypes in Chemnitz in 2026. We will set the date together with the participants.

Who should participate?

- Professionals from medicine, nursing, and therapy, makers, students, researchers, developers, and designers.
- No technical knowledge is required! Perspectives from everyday care practice make the workshop valuable.
- The workshop language is German & English
- Opportunity to network at the free included lunch

24 September 2026

11:30 - 15:30

Adam-Kuckhoff-Str. 35
06108 Halle (Saale)
